

Cold liquid applied
Markings

**MULTIPLE
CHALLENGES
ONE
SOLUTION**

Triflex marking products have been developed, tested and proven to offer exceptional performance on German autobahn, roads, car parks, airports and much more.

Unbeatable versatility

Triflex marking systems are compatible with the widest range of substrates including asphalt (HRA and SMA), tarmac, concrete, coatings, pavers, granite, metal, existing markings and more.

Extremely tough and durable

Exceptional weather, traffic and UV resistance ensures Triflex marking systems perform over time. Triflex marking products have been proven to perform in excess of 20 years on very high space change car parks without replacement.

Ultra rapid curing

Totally cold applied, quick and easy to install and traffickable in as little as 15 minutes (7 minutes with machine application) even in temperatures down to 0° - significantly reducing disruption.

Maximum colour, texture and design options

A wide choice of materials with a variety of thicknesses and textures combined with a large standard colour range allows you to create a design to meet your needs, enhancing safety, improving wayfinding and aesthetics. Virtually any bespoke colour can be made to order.

More than just a marking system

Triflex project expertise

We have more than 40 years experience as a manufacturer of marking materials and lead the market in terms of research and development. We can offer customised solutions to meet specific project requirements. Personal contact is guaranteed without complications, we offer maximum cooperation between contractors, clients, our staff and systems.

Triflex application

Extensive knowledge and experience are at the heart of every successful project. We provide extensive training at our dedicated training facility and at customer's premises and offer support to ensure the best possible results, the highest levels of quality and long-term satisfaction.

Triflex quality

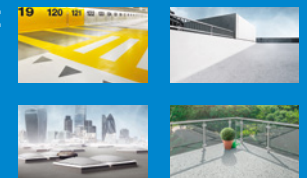

- German developed, engineered and manufactured in the most advanced manufacturing facility of its type
- Extensively tested and certified products and systems
- Continuously enhanced and optimised products focusing on innovation
- Maximum safety
- Environmentally conscious supply with recyclable bulk containers and materials with proven Life Cycle Assessed (LCA) performance against other technologies

Triflex service

This is where we as the manufacturer can outperform any distributor, as we understand our materials better and are therefore better able to advise. We can support your project with our technical team from start to finish. We offer advice from the word go, help you with product selection and specification, and can deliver direct to the construction site.

We're also experts in:

- Coatings
- Car parks
- Roofs
- Walkways, balconies, terraces
- Energy and infrastructure

Markings

Robust, varied and colourful

Triflex marking products provide solutions that are tough, durable, rapid curing and as with all Triflex materials are totally cold applied.

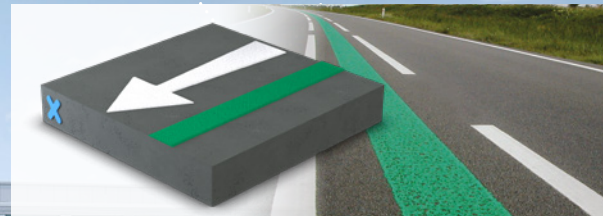

Typically installed using a simple, single process application by hand or machine, the majority of products cure in around 15 minutes (as low as 7 minutes when spray or machine applied) - even at temperatures down to 0°C. The wide range of Triflex solutions are available in a significantly wider colour range than traditional materials and ensure Triflex have a solution for every cold marking application.

With outstanding adhesion to a wide variety of substrates and superior performance in comparison to thermoplastic solutions particularly on concrete, it's clear to see why Triflex marking products are the ideal choice for:

- Car parks
- Service decks
- HGV loading areas
- Shopping centres
- Retail parks
- Airports
- Offices
- Roads
- Highways
- Playgrounds
- And much, much more.

MARK THE WAY WITH EXCEPTIONALLY VERSATILE MARKINGS

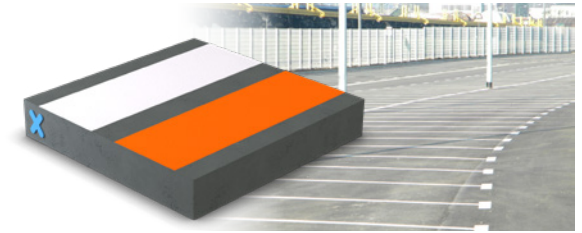

Triflex Cold Plastic / Triflex Friction Plastic

Our heaviest duty, thick layer marking systems for high use areas such as motorways, roads and the toughest solution for car parks where we have proven durability of more than 20 years in the UK. These long lasting, ultra durable, BSI and BAST certified line markings are also suitable for symbols, lettering, pedestrian crossings, rail platform markings and much more. Triflex Cold Plastic has a smoother finish and Friction Plastic a more textured finish.

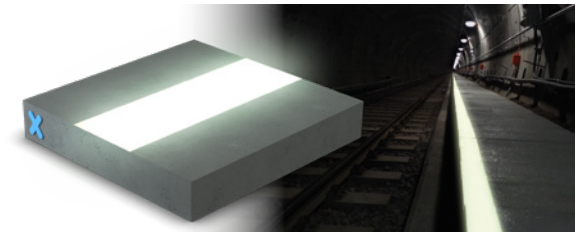

Triflex Preco Line 300

Ideal as an alternative to traditional chlorinated rubber systems, Triflex Preco Line 300 is toluene free and therefore safer to use. It is ideal for creating smoother, thinner layer markings such as parking bay markings where the marking system is subjected to moderate wear. Available in an extensive range of colours the product can be applied by spray or roller.

Triflex ParkLine

Triflex ParkLine offers an alternative, epoxy based solution to traditional chlorinated rubber and acrylic paint markings. Although a 2 component epoxy based system, it is designed for application by single component airless spray, and provides enhanced durability over other thin layer marking paints.

Triflex NightLine

Triflex NightLine is the ideal solution for luminescent safety markings and escape and rescue routes, both internally and externally. Triflex offer NightLine variants of Triflex Cold Plastic, Triflex Preco Line 300 and Triflex Preco Line EP 2K which is similar to Triflex ParkLine but designed for internal areas.

In addition, the Triflex marking range includes:

- Triflex Profile Plastic
- Triflex Roll Plastic
- Triflex Spray Plastic
- Triflex EPS
- Triflex Tactile Markings
- Triflex Marking Templates
- Specialist primers and additives including glass beads and anti-skid particles

Triflex markings are available in a wide range of standard colours, with some examples shown below, bespoke colours can be made to order.
